

DANISH ARSHID

AI/ML Engineer | Software Developer

danisharshidmantoo@gmail.com | +91-9906827451 | [LinkedIn](#) | [GitHub](#) | NIT Srinagar, CSE '26

EDUCATION

National Institute of Technology, Srinagar

2022 – 2026

B.Tech in Computer Science & Engineering | CGPA: 8.11/10

EXPERIENCE

AI/ML Engineer Intern — Robonox

Dec 2024 – Feb 2025

Remote | TechFusion 2.0, 45-Day Internship & Training Program

- Designed and deployed a real-time computer vision pipeline using TensorFlow and OpenCV, achieving 95% accuracy at 20+ FPS on live video streams.
- Reduced inference latency by ~30% through optimized preprocessing and pipeline profiling, improving real-time throughput.
- Managed the full ML workflow — preprocessing, training, evaluation, and deployment — in a Linux environment using production-style development practices.

PROJECTS

SmartNotes — AI Note Management Platform

2025

React, Node.js, Express, MongoDB, LLM APIs, Docker

- Built an AI-powered note management platform that automatically tags, summarizes, and transcribes audio and video notes using LLM APIs.
- Designed a transcription pipeline that converts audio/video content into searchable text stored in MongoDB, enabling users to search recordings by specific spoken words or phrases.
- Built scalable RESTful APIs (Node.js/Express), designed MongoDB schemas for notes/transcripts, and deployed via Docker on Render with JWT authentication.

Multi-Agent Research Assistant

2025

Python, FastAPI, LLM APIs, Docker

- Developed a multi-agent AI research assistant with an Orchestrator Agent that decomposes complex user queries and coordinates specialized Research, Analysis, and Summary agents for multi-step reasoning.
- Designed an abstraction layer decoupling agent logic from any single LLM provider, enabling swappable model backends without core logic changes.

Resume Evaluation & Candidate Management System

2025

React, FastAPI, Python, MongoDB, LLM APIs

- Built a full-stack system that extracts structured data from resumes (PDF parsing) and job descriptions, then feeds both into an LLM pipeline for automated candidate evaluation.
- Implemented AI-generated match scoring, compatibility analysis, and improvement recommendations comparing candidates against job requirements.
- Persisted evaluation results in MongoDB and built a React frontend for reviewing AI-generated insights and rankings.

Secure Transaction API System

2025

Java, Spring Boot, JWT, REST APIs

- Built a Java Spring Boot REST API for secure transaction management using JWT authentication, role-based access control (RBAC), and request validation.
- Implemented protected REST API endpoints and Docker-based deployment for backend service testing and deployment.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, SQL

Backend & Frameworks: Node.js, Express.js, FastAPI, Java Spring Boot, REST APIs

Frontend: React.js, Bootstrap, HTML, CSS

Databases: MongoDB, MySQL, PostgreSQL

AI/ML: TensorFlow, Scikit-learn, OpenCV, LLM APIs, Prompt Engineering, Multi-Agent Systems

Cloud & Tools: Docker, Linux/Unix, Git, GitHub, Render, Jupyter Notebook, Postman

Concepts: REST APIs, JWT Authentication, RBAC, OOP, DSA, Secure API Design

CERTIFICATIONS

- Machine Learning Specialization — DeepLearning.AI & Stanford Online (Andrew Ng), via Coursera
- 100 Days of Code: The Complete Python Pro Bootcamp — Angela Yu (Udemy)
- The Complete Web Development Bootcamp — Angela Yu (Udemy)
- TechFusion 2.0 — AI/ML & Deep Learning Internship, Robonox

ACHIEVEMENTS

- Solved 600+ DSA problems on [LeetCode](#) and GeeksforGeeks, building a strong foundation in algorithms, data structures, and OOP.
